## What is a quick response (QR) code?

A QR code (short for quick response) is a square image with black squares and dots. When you scan it with the camera on a smartphone or tablet, it helps you quickly open a webpage without having to manually type in a web address or URL.

How do I use a QR code?

1. Open the camera on your smartphone or tablet.
2. Focus on the QR code. A link will appear on the screen after a few seconds.
3. Tap on the link and a webpage will open.

What should I do if my camera does not scan the QR code?

Try installing a QR code reader by following the steps below:

To open Google Assistant on Android

1. Hold your phone or tablet up and say "OK, Google."
2. Say, "Search for QR code reader in app store." Search results will display on your screen.
3. Choose a QR code reader app and click "Download" to install it.
4. Open the QR code reader app you downloaded from the app store.
5. Follow the app instructions to scan a QR code.

To use Siri on iOS

1. Hold your phone or tablet up and say "Hey, Siri." Siri will respond and wait for you to give a command.
2. Say, "Search for QR code reader in app store." Search results will display on your screen.
3. Choose a QR code reader app and click "Download" to install it.
4. Open the QR code reader app you downloaded from the app store.
5. Follow the app instructions to scan a QR code.
